PRODUCT PREVIEW

Zircon-Hybrid Abutment

Advantages:

- Metal Precision Fit
- Ceramic in the Important Esthetic Zone
- Titanium Construction bears Stress better than Ceramic

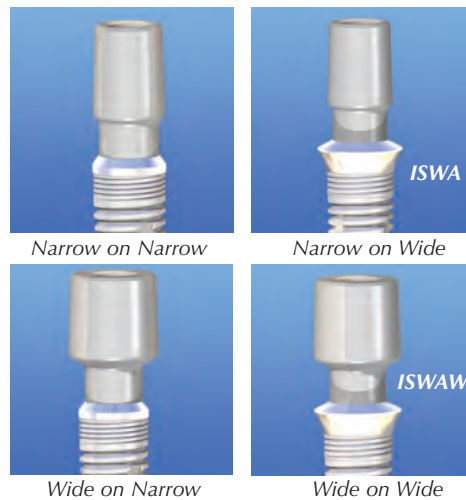

With the **Zircon-Hybrid Abutment**, you no longer have to worry about masking out the metal in the gingival area. The new **Intra-Lock® Zircon-Hybrid Abutment** retains our Titanium Alloy sub-structure that is modified by the addition of an A2 shade Zirconium Ceramic Collar. You can have the best of both worlds; the

precision and strength of our Titanium Alloy combined with our durable, fracture-resistant and esthetic white Zirconium ceramic.

Switch

Advantages:

- **Lock & Load!** ... A Marvel of Clinical Versatility
- Accommodates Both One and Two-Stage Surgical Procedures
- Crestal Bone Preservation May Be Enhanced

Profile Cover Screws

Advantages:

- Maintains Flap Separation from Abutment During Healing Period
- Titanium Construction

Periodontal health is encouraged when the restoration follows the soft tissue in a natural, physiologic way. **Intra-Lock® Profile Cover Screws** offer a selection of curvatures and dimensions that enable the most appropriate profile to be created. For immediate load cases, these profile cover screws guarantee no closure of the surgical flap.

Multiple implant body configurations combined with a choice of abutments enable the selection of a specific size and appropriate profile. This feature enables the clinician to determine the specificity of design that is congruent with the specific clinical situation.
